## WHO WE ARE

AccuriX Laboratory Inc. is a comprehensive and reliable independent urine toxicology reference laboratory headquartered in Charlotte, North Carolina. Our combined state of the art instrumentation, proven testing methodology, and dedicated staff will ensure the timely delivery of vital information needed to transition your patients toward optimal health.

## WHAT WE DO

We help providers maximize the benefits of drug therapy while reducing the risks of drug abuse. Our core focus is on Pain Management, Medication Monitoring, Drug Diversion, Therapeutic Level Drug Monitoring and Screening for Drugs of Abuse. Our extensive drug menu is constantly evaluated and modified to reflect the latest trends of both illicit and prescription drug preferences.

## GOING ABOVE AND BEYOND MOST OTHER LABS...

BY UTILIZING THE MOST ADVANCED  
TECHNOLOGY IN THE INDUSTRY.

**At AccuriX Laboratory, our goal is to help you provide your patients with the very best of care.**

### SUPPORTED LIQUID EXTRACTION

We utilize liquid chromatography- tandem mass spectrometry (LC-MS/MS) testing techniques, and we employ a supported liquid extraction (SLE) sample preparation method. Unlike a typical laboratory's "dilute and shoot" preparation method, SLE removes impurities and potential interferences from the sample.

The result? Precise quantitative results with better sensitivity to allow for the detection of drugs at lower concentrations.

*Our Goal Is To Offer You The Highest Level Of Care.*

### PRESUMPTIVE SCREENING

Rapidly and accurately, presumptive screening can identify a sample as either negative or presumptive positive. Delivering qualitative results, this analysis is useful in identifying the presence or absence of select drugs of abuse and prescription medications. In addition, this screening procedure includes specimen validity evaluations to measure urine specific identifiers, ensuring a sample has not been tampered with at the time of collection.

### CONFIRMATION TESTING

Confirmation testing definitively detects individual compounds using a highly sensitive Liquid Chromatograph – Tandem Mass Spectrometer (LC-MS/MS). This type of testing provides quantitative results of drugs and/or drug metabolites present in a sample. Unlike presumptive screening, confirmation testing distinguishes between illicit drug, prescription medicines, and over the counter medications.

### CONTINUOUS CLIENT SUPPORT.

Passionate and dedicated, our staff works diligently to ensure that you have the best laboratory experience possible. We provide personal support during every stage of the analytical process and our Certifying Scientists are directly accessible to you.

### CONVENIENT.

We ensure the safe and reliable transport of your samples via complimentary courier pickup (local) or overnight services.

### CUSTOMIZATION.

Our testing parameters, methods, and reports are all customizable at your request.

- We are committed to providing certified quality testing for over 100 analytes with turnaround time of **24 to 48 hours** from sample receipt. We offer the most up-to-date technology possible including our user-friendly, customizable, Laboratory Information Management System (LIMS).
- Our methods and testing procedures are based on proven best practices that are continuously being evaluated in order to deliver unsurpassed quality and service. We recognize the importance of accurate drug testing as a pertinent piece in patient care when partnering with treatment providers.
- **AccuriX Laboratory** harnesses the latest technologies in liquid chromatography/mass spectrometry (LC/MS) testing techniques which are known as the Gold Standard in drug testing, ensuring that we deliver quality beyond your expectations.
